Example of a Line Graph

For your line graph:
The number of pieces of pasta will go on the vertical (y) axis where height is on this example.
The interval (1, 2, 3, 4, 5, and 6) will go on the horizontal (x) axis where age is on this example.

Plot the points (1, number of pieces of pasta you mined during your first turn), (2, number of pieces of pasta you mined during your second turn) and etc.

Draw a line to connect the 6 points you plotted on your graph.

You will have two lines. One for Miner1 and one for Miner 2
